RESHIN / PROJECT REVIEW

OEM Cooperation Brief

Complete available information for an initial supply-model discussion.

Company and contact

Country / target market

Application and intended display role

Preferred supply model (OEM / own brand / SKD / ODM)

Baseline model or required size and resolution

Signal interfaces and source equipment

Mounting / enclosure constraints

Branding and documentation requirements

Sample quantity and estimated annual demand

Project stage and requested schedule

Questions / requirements still open

This blank worksheet is not a quotation, approval, completed test record or compliance certificate.

Do not enter patient information. Commercial terms and test criteria require separate agreement.

Surgical Display Signal-Chain Review

Use the actual or representative processor and planned connection path.

Project reference / reviewer / date

Processor model and firmware

Output resolution / frame rate / format

Display model / hardware / firmware revision

Input port and display picture mode

Cable type / length / adapters / routing devices

Mounting arrangement and installation conditions

Modes and startup / switching cases to test

Acceptance criteria and their project-specific basis

Measured results / evidence references

Open issues / decision / approval owner

PACS Display Configuration and QA Record

Planning worksheet: the responsible QA team defines applicable acceptance criteria.

Workstation role / project reference / date

PACS / operating system / GPU / driver versions

Display model / revision / screen quantity / orientation

Interface / cable / resolution / refresh rate

Calibration target and display settings

Instrument / calibration status / test method

Warm-up / room lighting / measurement geometry

Applicable QA guidance / acceptance criteria

Measured values / test-pattern record references

Decision / open issues / reviewer

Approved configuration / replacement / change owner
